

GacoWallFoam

SPRAY POLYURETHANE FOAM INSULATION

How is GacoProFill installed?

GacoProFill is quickly and easily installed by Gaco Western Qualified Applicators. It is injected into empty wall cavities through small holes drilled through exterior or interior walls. Once the foam has been installed, the holes are plugged and repaired.

GacoProFill is the ideal companion to other interior and exterior renovations. Installing new siding?

Upgrading your HVAC system? Giving your interior a fresh coat of paint? These are great opportunities to have GacoProFill Polyurethane Foam Insulation installed in your home's uninsulated walls!

About Gaco Western

Founded in 1955, Gaco Western remains today a family-owned business with its roots in technology and product innovation. This company was built on three fundamental principles: superior products; sold by experts; at competitive prices. Today, Gaco Western coatings and spray foam insulation cover millions of square feet of commercial and residential buildings around the world, earning a trusted reputation in the construction industry as a producer of best-of-class waterproofing and insulation solutions.

Polyurethane Foam Insulation for Existing, Uninsulated Walls

GacoProFill®

LOWER Energy Bills
INCREASED Comfort and Value

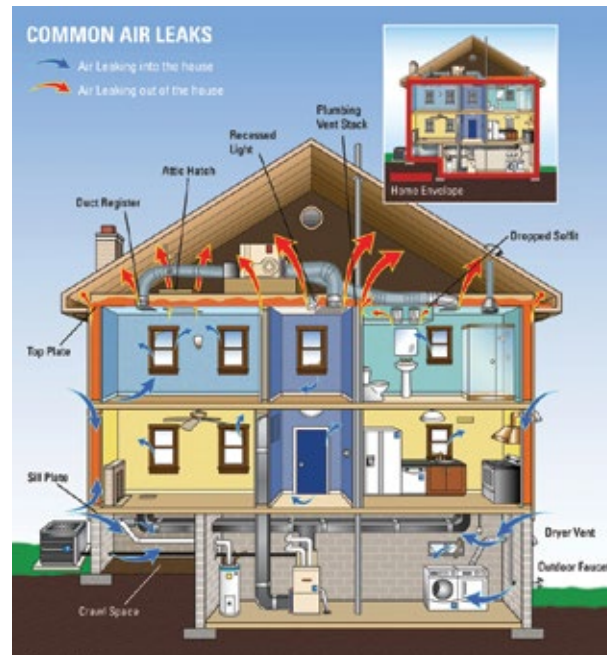

Why GacoProFill?

The secret to energy efficiency is simple: keep the outside air out, and the inside air in. Air can travel through even the smallest cracks, holes or seams.

Other injection foam insulations leave voids and deteriorate if not protected by an air barrier. GacoProFill is both insulation AND air barrier – and because it won't shrink, settle or sag, it will continue to provide seamless insulation, energy savings and comfort year after year.

As a homeowner, you have many options for retrofitting your home with insulation. To ensure maximum added-value and comfort, choose GacoProFill Polyurethane Foam for your insulation project.

GacoProFill is designed specifically for use in existing homes and buildings.

GacoProFill makes complete sense from the moment it bonds to the framework of your home. It is installed by mixing unique liquid components to create foam that expands on contact and spreads into the tiniest cracks and openings to insulate and seal gaps.

GacoProFill provides a seamless air barrier to help reduce energy costs by up to 40%; it eliminates drafts for increased comfort; and it creates a quieter home by blocking and absorbing airborne noise.

Where can GacoProFill be used?

GacoProFill is the ideal solution for retrofitting existing homes which do not have insulation in the walls.

Use GacoProFill in conjunction with other Gaco spray foam products to provide a whole-house insulation and air-sealing solution for improved energy efficiency.

Contact us today for more information about how GacoProFill can enhance the value of your home – and your quality of life.
